Continuation of 5. does NOT place the application in condition for allowance because: In additional support to the instant rejections, the Examiner respectfully notes that within the limitations of independent claim 1, the term formalism fails to provide an accurate description of the interpreted multimedia document. Furthermore, the Rosch reference suggests links, which create new runtime objects for the states of the slide show button and sets the position and selection-style of each created button-image object. When the run-action is activated, the image is displayed and an audio-stream is transmitted from server to client. If the user clicks onto the picture, a transition to the start page is triggered. The reference suggests the utilization of a generic event condition action along with the use of image objects. The Glass protocols define the procedures for the exchange of data between all agents that exist in the system. The Examiner believes the Glass protocols provide a suggestion of the formalisms (as presently claimed) within the event-condition-actions of the multimedia presentation system. See Rosch, page 143.
